Version 6.0.14.1

Version	6.0.14.1
Release date	13/02-2024
Type	Minor release

Enhancements & New Features

Component	Description
Calibration	Added support for A/D offset calibration on the CPT-XD2

Bugfixes

Component	Description
Operator Interface	Fixed issue where the "Action - Jump" step always jumped to the pass action, even if the condition did not succeed.
Operator Interface, Sequencer, Repair Interface, Critical Component Verification	Fixed issue where the tabs would switch to their test tab without the "Activate on Barcode Received" setting enabled.
Sequencer	Fixed that the result barcode was not used for checking if a result exists.
Sequencer	Fixed that the test always ends when a step fails.
CPT-X	Fixed that the measurement unit was not shown in a gateway profile scanned from a box.
Manager	Fixed some cases where the colors generated for the CPT-X based sample charts could generate inconsistent colors across modules.
I/O Controller	Fixed issue where the input states were not evaluated on startup, causing inputs that were already active to not detect changes before being toggled to inactive.
Calibration	Fixed that calibration was not working.
Calibration	Fixed that instrument connection would always fail during calibration.
